

Diagram illustrating a DNA double helix structure. The left strand consists of bases G, G, G, G, Y, G, G, G, U, C, G. The right strand consists of bases C, C, C, C, R, C, C, C, A, G, C. The bases are color-coded: G is grey, Y is white, R is black, and A is red. The bases are connected by horizontal lines representing hydrogen bonds.
